

Master Data Online Product Information Governance

Prospecta empowers users to take control of their business processes. Our Master Data Online (MDO) solution for Product Information Governance is one place to manage all your product information and related data to ensure that your customers and sales teams have accurate and complete information in one place. The solution also has a collaborative feature which is not based on a typical PIM solution.

ABOUT MDO

MDO is the engine that ensures you are working with quality data throughout your business. It seamlessly integrates with any product information management solution, resulting in a strong collaboration solution across all catalogue and product data. MDO delivers business users with trustworthy, reliable data by mediating, managing and governing core master data shared by multiple master data domains. It enables business users to easily create information with standardized business rules, workflows and approval processes. Available both on cloud and on-prem.

MDO PRODUCT INFORMATION GOVERNANCE

The MDO Governance Framework allows you to manage all kinds of master data by using both active and passive governance processes. Below are the key master data areas that can be managed via the governance processes.

- Core Product Information with Attributes
- Managing Product Variances which helps in configurable products
- GS1 Information and publishing to GS1 Catalogue
- Pricing Data

DATASHEET

PASSIVE GOVERNANCE FRAMEWORK

Run business schema validations on master data and ensure that data is consistent based on the new rules. This framework will also send relevant workflows for exceptions and ensure data is fixed.

ACTIVE GOVERNANCE FRAMEWORK

This is a combination of business rules and workflows defined as part of creation and maintenance of master data. All data is entered and approved in MDO before it is integrated into your enterprise systems. Intuitive workflows which can work both in a parallel and sequential mode can be defined in MDO.

DATA SHEET

MASTER DATA YOU CAN TRUST

MDO AND GS1

The GS1 standards are becoming a global standard for many industries, the Food and Healthcare industries. The GS1 extension in MDO will not only validate against all GS1 attributes but also publish into the GS1 Catalogue. This improves the collaboration and the efficiency required for GS1 related information. The Passive Governance framework in MDO will also check the old information based on the ongoing changes of GS1 standards. This will help you to interact with your customers much more efficiently.

MDO DATA HEALTH ANALYTICS

Displays the health of your data based on various exceptions on business rules. The rules check consistency, accuracy, completeness, uniqueness and integrity of data. This provides a very quick overview of your data before you start any other initiative which is reliant on quality data.

MDO STRATEGIC PARTNERS

MDO has developed partnership with key players to add value in Product Information.

SAP - MDO is an SAP Certified solution and can integrate both into core Material Master and IS Retail solutions for both Product and Pricing. The integration is seamless as MDO can leverage the SAP Cloud Platform integration layer to send and receive information in SAP.

SAP Hybris - SAP Hybris (formerly known as Hybris) is also a strong partner with MDO. Hybris PCM is also an OEM into the core MDO Product Information solution and provides a repository that is built on a data quality and governance model. This can be used to launch the Hybris commerce which sits on top of MDO.

Salesforce - MDO is now an app exchange partner to salesforce for all customer and product information. This provides a strong data quality layer to Salesforce for their sales related processes.

COLLABORATION PLATFORM

VENDOR COLLABORATION

This allows you to register your vendors and collaborate with them for their catalogue and pricing data. This can start with a registration link on a website allowing vendors to take ownership of their own information.

The catalogue can be accessed by your procurement system using the MDO OCI punchout and create your purchase requisitions and orders without physically storing the catalogue information in your procurement systems.

This is good for both indirect procurement and organizations who are wholesale focused and need vendors to upload their catalogue information.

Step 1 – Vendor Registration Process

Step 2 – Vendor Uploads Catalogue (Or can use Excel Connect to Upload Catalogue Information)

Step 3 – Procurement Teams can punch out to the catalogue

CONFIGURABLE QUOTE PROCESSING

This allows your sales teams to quote products which are complex and configurable. The management of these products can be done by business users and new rules can be created for both the product and pricing related to it. The solution has various ways of modelling and customizing the product. This can be applicable where you want to customize a standard offering eg a Display Home or a fully built custom machine that is needed for production.

CUSTOM COLLABORATION PROCESSES

These can be defined using the MDO platform for any additional or specific processes that your business needs.
